

ATTACHMENT A: CCR Deltas Between Version B and Version C of CCR-96-0303.

During the implementation phase of Version B and at which time the Toolkit information was to be loaded into RTM, it was discovered that the table of new RBRs for Toolkit had been erroneously left out of the CCR. It was also found, through analysis, that many of the RBR #A and #B type requirements were already mapped to they corresponding Level_3 requirements. At the time of the original CCR, these mappings did not exist. As a result, this Version C of the CCR-96-0303 is formed to correct these errors found in Version B and produce a CCR that can completely implement the Toolkit information into the RTM database. The following deltas apply to Version C and Version B of CCR-96-0303.

A table containing the new Toolkit RBRs to add to RTM is included in the CCR Version C which was not presented in Version B.

All L3-to-RBR mapping that are in Version B of this CCR and that are found to be currently mapped in RTM are removed. These links include all of the RBR #As and #Bs type requirements in the L3-to-RBR table.

PGS-0530#B and PGS-0458#A and any mappings to these requirement are removed, since these requirements are not in RTM. The Level_3 PGS-0530 was found to be deleted from the F&PRS and should not have appeared in this CCR. Release A has no responsibility to PGS-0458 and therefore there is no RBR PGS-0458#A.
